Math 20-2
Objective: Solve Problems that involve properties of parallel lines and triangles. Skill: Use reasoning to solve problems.
A. Solve at least on of the Sudoku.

B. Parallel Lines and Triangle Problems.

1. Given PQ is parallel to RS. Use parallel line and triangle properties to determine the following angle measures:
a) $\Varangle P Q S$
b) $\Varangle P T Q$
c) The other four angles.

2. Given $A B$ is parallel to $C D$. Use parallel line and triangle properties to determine the following angle measures:
a) $\Varangle C D E$ and $\Varangle C D B$
b) All the other three angles.

C. Use angle sums to determine relationship between an exterior angle and angles in a triangle.

Example 1:
In the diagram, $\angle \mathrm{MTH}$ is an exterior angle of $\triangle \mathrm{MAT}$. Determine the measures of the unknown angles in $\triangle$ MAT. What two interior angles add to equal $\angle \mathrm{MTH}$ ?

Example 2;
In the diagram, $\Varangle T P Q=110^{\circ}$ and $\Varangle Q R P=37^{\circ}$.
Why is , $\Varangle T P Q$ considered an exterior angle of $\triangle P Q R$ ?
Determine the measures of the other unknown angles in $\triangle P Q R$.
What two interior angles add to equal, $\Varangle T P Q$ ?

What two angles inside a triangle will always add to equal an exterior angle in a triangle? Why?

Use triangle properties, parallel line properties and exterior angle properties to write equations and solve problems:

1. Write an equation and solve for $x$.

2. Given: $M N \| P Q$ and $M Q \| N P$.

Determine the measures of $\Varangle M N P, \Varangle M N O, \Varangle N M O, \Varangle Q M O, \Varangle M Q O$ and $\Varangle Q O M$.
